

Patient Reported Outcome Measure for Vascular Malformation ("PROVAM") Questionnaire

C16497

****Once a license request has been received and approved, JHU will send a license for execution via DocuSign to the Requestor's or Authorized Representative's email. After full execution of the license, the technology materials will be made available for download via this portal.****

Product Description

PROVAM was developed to assess symptoms, functional limitations, and social/emotional effects experienced by patients with low-flow vascular malformations (VMs). The 30-item instrument assesses the domains of pain, emotional/social well-being, functional impact, and treatment satisfaction. Two additional items assess ease of understanding and relevance. PROVAM is responsive to improvement after treatment and may be useful to assess health-related quality of life in patients treated for VMs.
